

MOCKK

```
class PresenterTest {  
    val view: View = mockk(relaxUnitFun = true)  
  
    @Test  
    fun `given non-empty list when presenter start then display elements on view`() {  
        val elements = listOf(  
            Element(1, "first"),  
            Element(2, "second")  
        )  
  
        val dataProvider = mockk<DataProvider>()  
  
        every { dataProvider.getAll() } returns elements  
  
        val presenter = Presenter(view, dataProvider)  
  
        presenter.start()  
  
        verify { view.displayItems(elements) }  
    }  
}
```
